

LET YOUR FUTURE GROW WITH

# Westinghouse

WESTINGHOUSE ELECTRIC COMPANY LLC

Our commitment to safe, clean nuclear energy is second to none. Nuclear power emits no greenhouse gases during the production of electricity, and thereby helps to fight climate change and keep our air clean. Today, nuclear energy provides 15 percent of total global electricity generation and no company is more committed than Westinghouse to supporting the world's operating nuclear plants with the fuel, products and services needed to keep them operating safely and competitively.

As the need for energy grows, Westinghouse is ready with our **AP1000** nuclear plant — the most technologically advanced available in the global marketplace. It is designed to be 200 times safer than the United States Nuclear Regulatory Commission requirements and able to withstand the most extreme events. Eight **AP1000** units are under construction around the world, and our design has been selected as the technology of choice for a further 14 units. We are currently working on several opportunities to bring the **AP1000** technology to countries in Europe.

Be a part of the solution to the global growth in demand for safe, clean electricity. Become a member of a company that is committed to customer success and providing future generations with safe, clean and reliable electricity.
