

Name: Bafiala Kalemba

Age: 30

University: Haute Ecole
Blaise Pascal, Seraing

Degree: Bachelor in
electro-mechanics

Job Title: Technical
Support

Bafiala started her Westinghouse career in early 2006 as a technical support in the Pump and Motor group.

She holds a bachelor in electro-mechanics and “really think that what I learned in school was very important to understand my current job, it was a very good basis for what I need to do now.”

“I applied to work for Westinghouse because I wanted a job that would mix work at the office and work on the field (i.e. on Nuclear Power Plants). And that’s what I really like about this job: every day I get to do something different.”

“When I first started, I had to read a lot of documents, get informed on our products, and had to attend some trainings. That was necessary to better understand how I need to do things, especially with Nuclear Power Plant procedures. Then I jumped right in when the project managers introduced me to the current projects.”

But it’s more than just the job, Bafiala also enjoys the social life present around the company. “Every now and then, we go out for lunch with some colleagues. There are also some after-work activities organized by the social activities committee, these are real opportunities to get to know our colleagues, to discuss and laugh together outside of the workplace.”
